We thoughtfully design streets to be safer, more comfortable, and more accessible for all modes.

From day one our staff accept the responsibility of promoting diversity, equity, and inclusion.
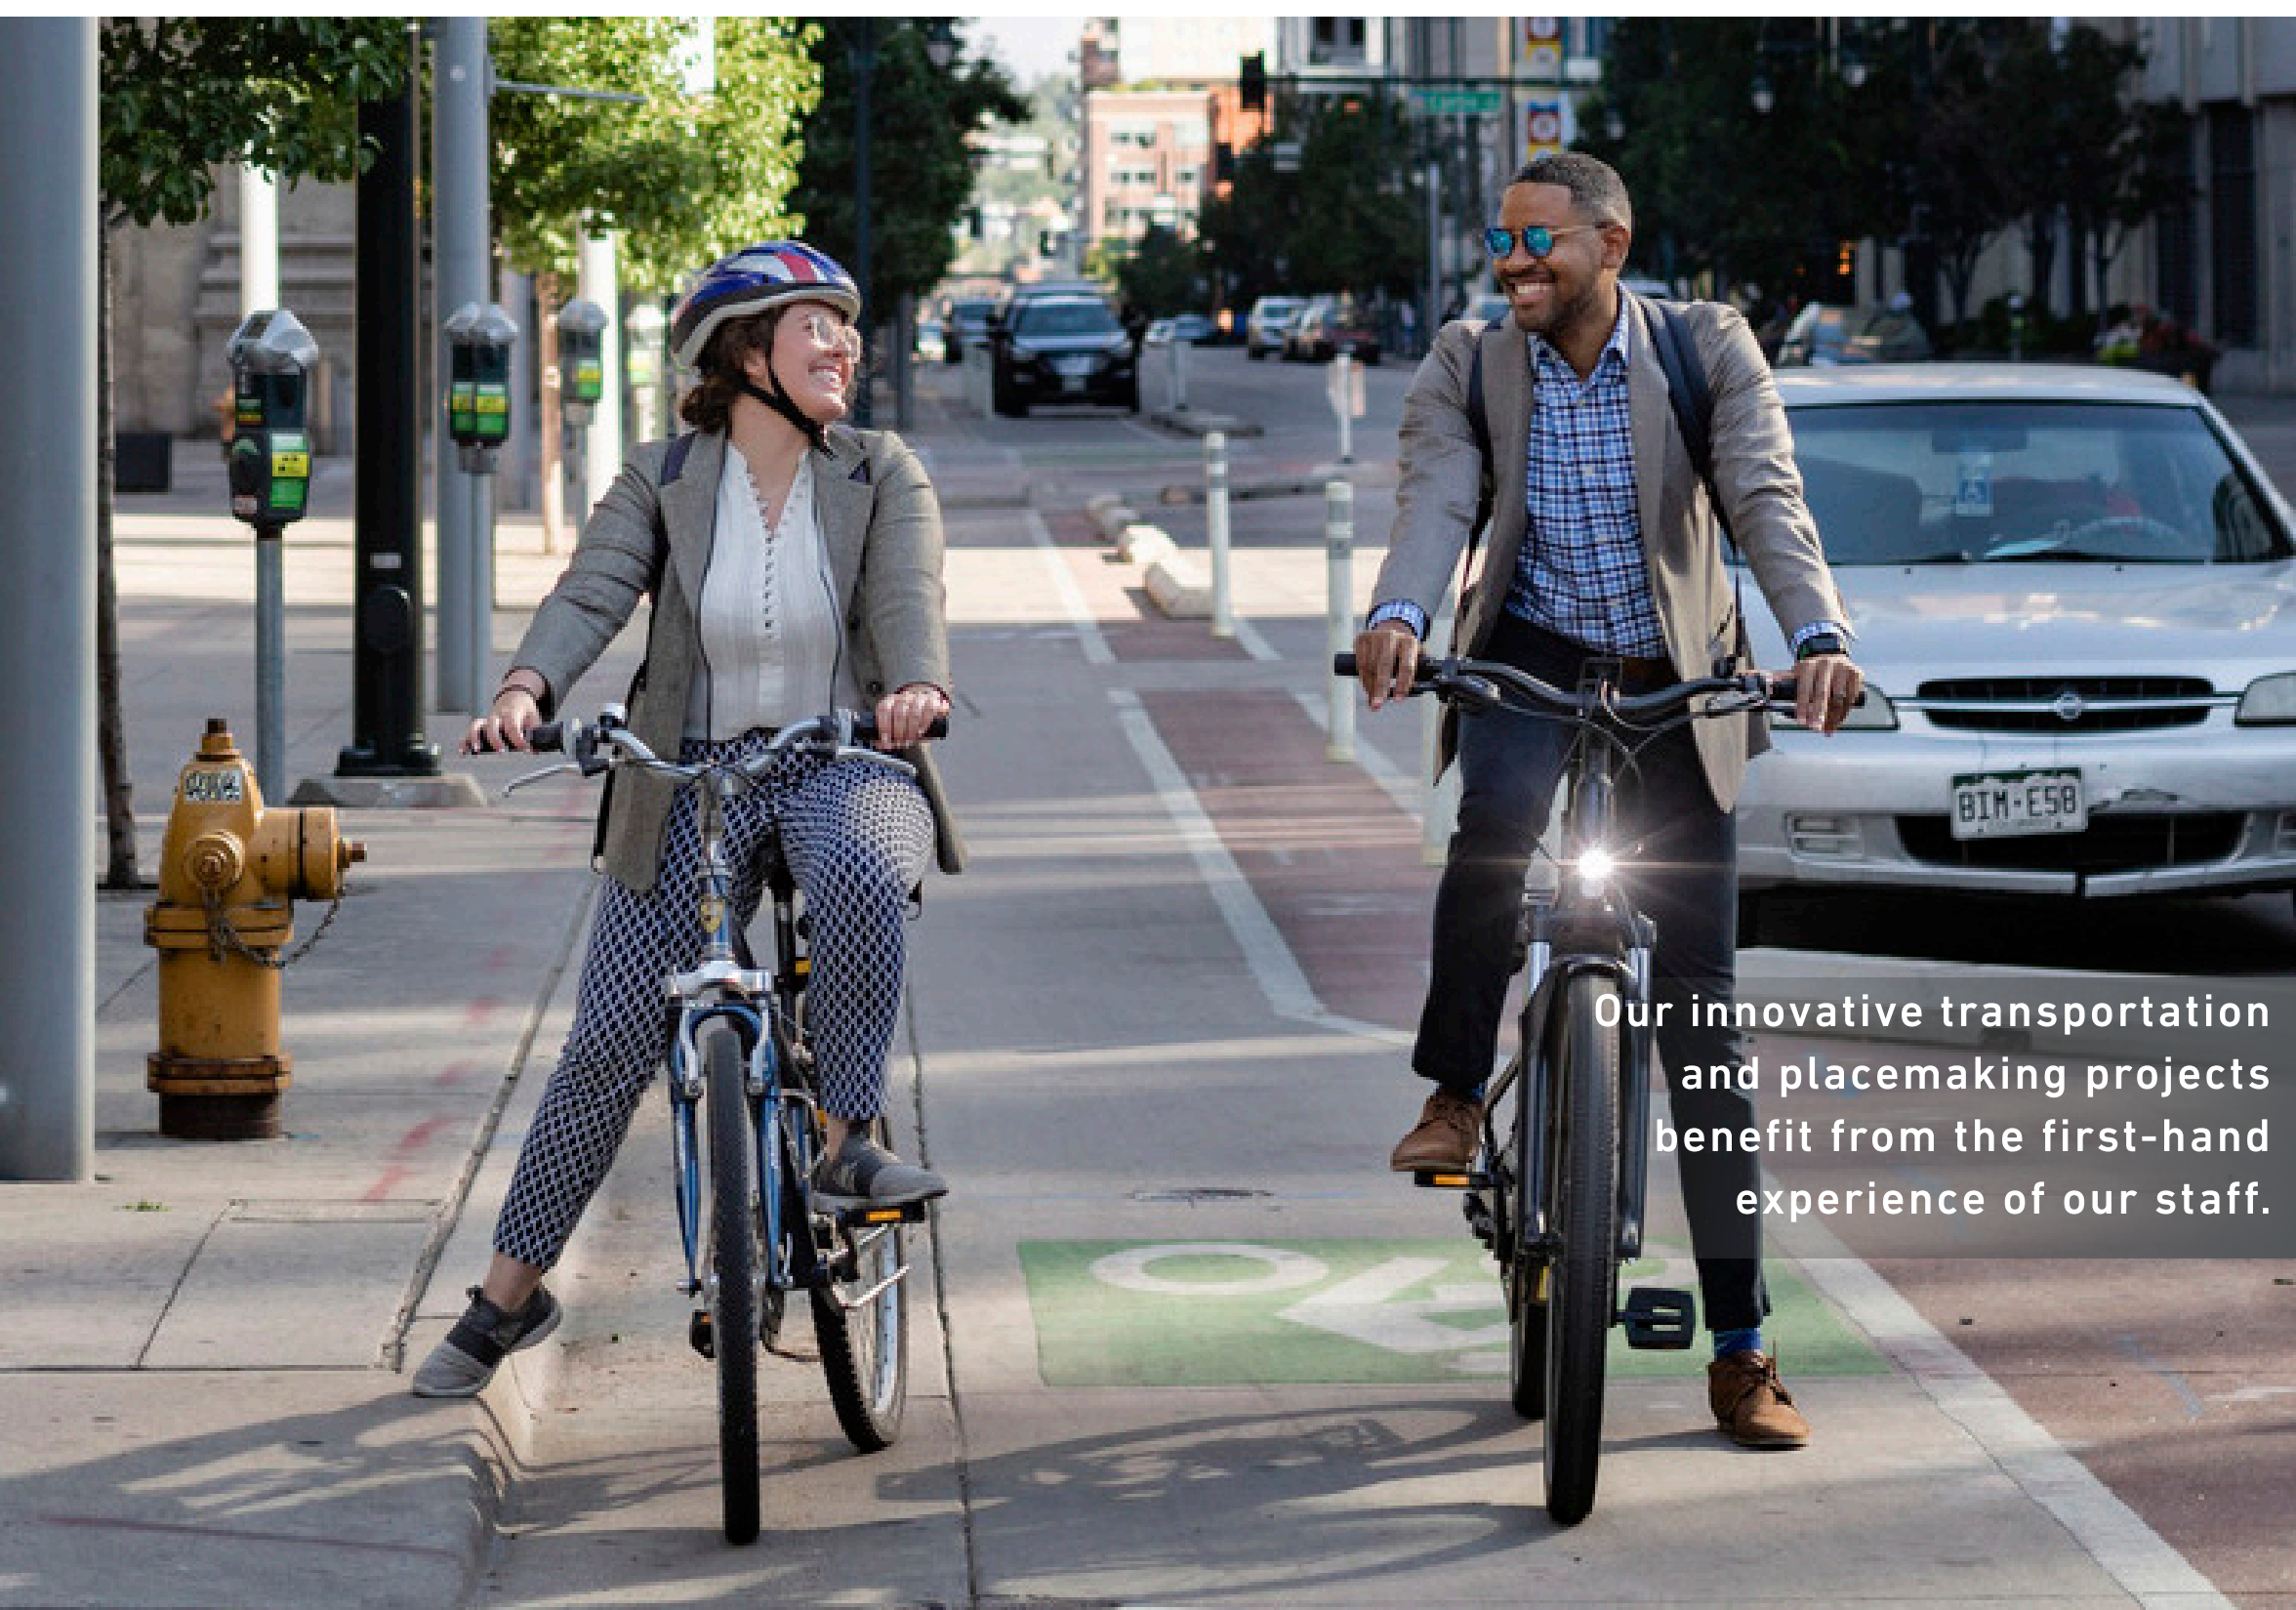

Bikeways =
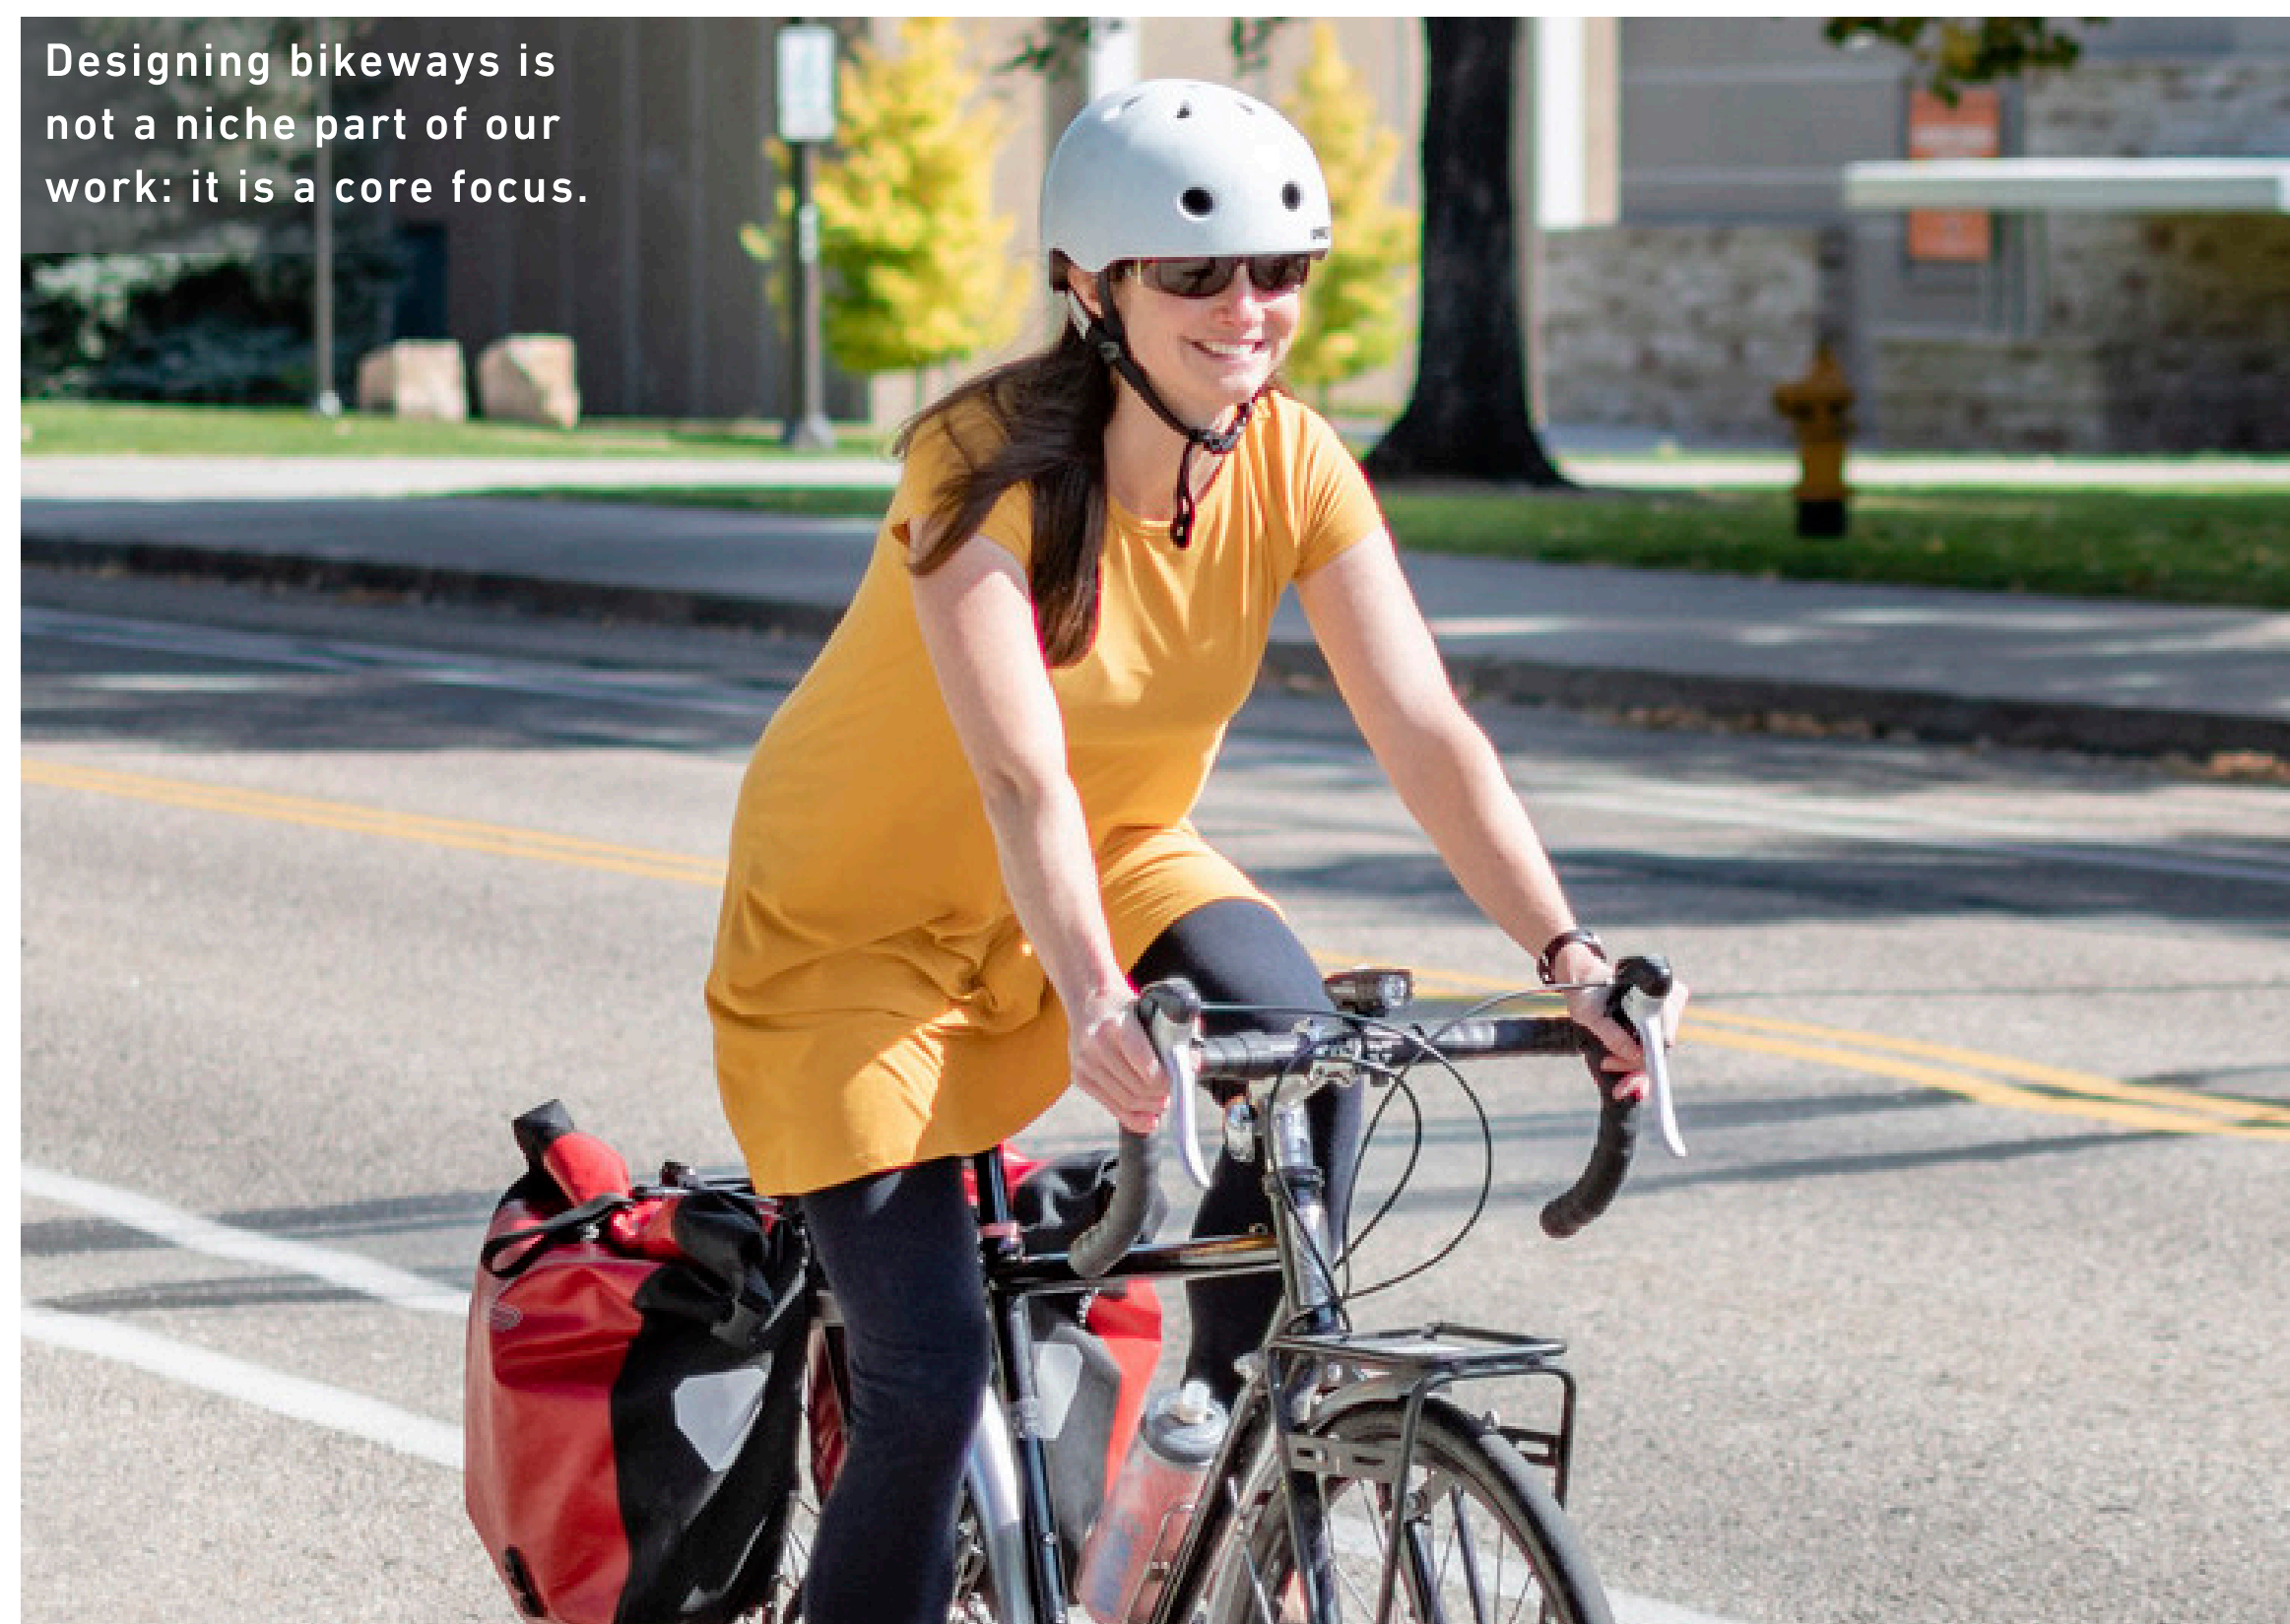

Safer Streets
Equitable Access
Climate Resilience

TOOLE DESIGN

Toole Design is at the forefront of urban bikeway planning, design, and implementation. We plan connected networks, create groundbreaking design guidance, and design transformative bikeways. For the Denver region we developed the Denver Complete Streets Design Guidelines, Denver Bikeway Design Manual, Boulder Design and Construction Standards, Fort Collins Intersection Design Guidelines, and DRCOG Regional Complete Streets Toolkit. We contributed to 5 of the 9 *Best New U.S. Bike Lanes in 2022* (PeopleForBikes), and are proud to work with NACTO to create the next Urban Bikeway Design Guide.

Our innovative transportation and placemaking projects benefit from the first-hand experience of our staff.

Designing bikeways is not a niche part of our work: it is a core focus.
